

# Passenger Information

confidential barrier-free direct

Do you want to have happier passengers?

Do you wish to inform your passengers even better?

**NO INTERNET  
NO WIFI  
NO GPS  
REQUIRED**

Now you can send passenger information from a public display directly to the smartphones of your customers: Fast and conveniently, individually and independently.

## 1 Problems of dynamic passenger information displays

- Display too far away
- Announcement or ticker missed
- Too much of information, overextension
- Visual impairment/myopia
- Crowded platforms, heavy luggage

## 2 Solution

- Displayed data (e.g. timetable updates) is being transmitted locally via radio signal
- Reception and display on smartphone
- NO internet connection/GPS/Wifi required
- Individual - filter/speech output/translation possible

## 3 Benefits for passengers and operators

- Convenience and comfort
- Time saving
- Protection of privacy
- Reduction in costs
- Customer loyalty

Förderinitiative des Bundesministeriums  
für Wirtschaft und Energie

- Patent pending
- Prototype existing
- Looking for licensees

You as a display manufacturer wish to benefit from this innovative method?  
Save your business advantage and make an appointment for a presentation.
